HOW TO DEAL WITH PILLING

'Pilling' is when small balls of fluff build up on the surface of the fabric which occurs with regular wear. This is not a sign of poor quality but a natural process that occurs when the fine fibres become entangled due to the rubbing (friction) during wear. This is perfectly normal and can be easily removed. In fact, frequent pill removal will make your garments looking newer for longer.

THINGS YOU WILL NEED

- A razor
- A jumper comb
- A electrical jumper shaver

METHOD

Whichever tool you've got, the same method applies.

Simply:

1. Lay the garment on a flat surface.
2. Gently pass your desired tool across the affected area. If you're using a jumper-shaver, apply with a circular motion. Avoid pressing into the fabric too much as this can damage its structure.
3. Gently brush off any loose fibres.

If any bobbles remain, repeat the process.

Remember that knitwear requires special care - go gently.
